PROFESSIONAL SUMMARY

Backend-focused software engineer building Python APIs, data pipelines, and automation tools, with a B.Sc. in Software Engineering. Built PowerStock, a full-stack inventory and order system that reduced manual inventory tracking by approximately 60%. Combines FastAPI, GitHub integrations, Docker, and React with hands-on QA experience testing financial software.

CORE COMPETENCIES

Backend: Python, FastAPI, Node.js, REST APIs, SQL

Integrations: GitHub API, OpenAI API, email parsing

Frontend: React, Next.js, TypeScript, JavaScript

Data: MongoDB, MySQL, Pandas, NumPy

Delivery: Docker, GitHub Actions, Git, Linux

Quality: Functional testing, regression testing, debugging

PROFESSIONAL EXPERIENCE

QA Tester — Quality AI (Bank Hapoalim)

Tel Aviv, Israel | 2026 – Present

- Validated banking workflows against requirements through functional, regression, and sanity testing, logging reproducible defects for engineering teams.
- Worked with developers, product managers, and QA peers to investigate issues and support reliable releases in a regulated setting.

Automation Technician — Gamatek

Golan Heights, Israel | Jan – Jun 2024

- Programmed PLC and robotic automation using Unitronics and low-level controls, translating operational issues into corrective changes.
- Traced failures across software, electrical, and mechanical layers to identify root causes and restore system reliability.

SELECTED PROJECTS

AI Code Reviewer (Python, FastAPI, GitHub API, OpenAI API)

- Automated pull-request analysis by processing GitHub diffs and returning structured code-review feedback through backend API endpoints.

PowerStock — Inventory and order management (TypeScript, Python, MongoDB, REST APIs)

- Reduced manual inventory tracking by approximately 60% through an API-backed system with a database schema and real-time synchronization.

Job Application Tracker (Python, Pandas, Streamlit)

- Turned job-related email into structured application records and dashboard views with filters, response statistics, and export.

TradeForge — Crypto trading platform (Python, FastAPI, Next.js, Binance API)

- Built a full-stack trading platform with a FastAPI backend and Next.js frontend, supporting paper, backtest, and live trading modes.
- Implemented risk controls and exchange integration through the Binance API for automated strategy execution.

JAM Pizza Truck — Digital ordering experience (Web app, WhatsApp integration)

- Built a Hebrew right-to-left (RTL) digital menu and ordering experience for a food truck business.
- Integrated WhatsApp-based ordering so customers can place orders directly from the menu.

EDUCATION AND PROFESSIONAL DEVELOPMENT

B.Sc. Software Engineering — Braude College of Engineering

2019 – 2024

Capstone: Full-stack inventory and order management system.

Training: QA Training (2025); Machine Learning in Production, DeepLearning.AI (2025); Machine Learning Specialization, DeepLearning.AI (2024); Ultimate AWS Certified Solutions Architect Associate course (2025).
